## U.G. (Chemistry)

Course Outcome: (CO)

| Class            | Name of the paper                                                 | Course outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B.Sc.I( Honours) | <b>Physical Chemistry-IA</b><br><br>Group-A: The States of matter | CO1 Describe the properties of gaseous state and how it links to thermodynamics system.<br>CO2 Relate the concepts of thermodynamics with statistical thermodynamics.<br><br>CO3 Explain Qualitative treatment of the structure of the liquid state physical properties of liquids.<br><br>CO4 Apply Seven crystal systems, law of rational indices, Miller indices, point and space groups, elementary idea of symmetry and symmetry elements.<br><br>CO5 Describe preparation of colloidal solution and their purification, properties of colloids. |
|                  | Group-B: Equilibrium                                              | CO6 Relate reversible and irreversible reaction<br>CO7 Compare equilibrium constant for homogeneous and heterogeneous reaction.<br>CO8 Explain Le Chatelier's Principle and relate between enthalpy H and internal energy U.<br>CO9 Explain thermodynamic isothermal and adiabatic processes for ideal gas.<br>CO10 Relate ionic Equilibrium, buffer solution, solubility product, HSAB concept.                                                                                                                                                      |
|                  | Group-C: Changes                                                  | CO11 Apply the concept of kinetics for first order reaction and half life, understand the importance of colligative property.<br>CO12 Explain elementary idea of crystal growths and catalytic activity at surfaces.                                                                                                                                                                                                                                                                                                                                  |
|                  | <b>Inorganic Chemistry- IB</b><br>Group-A: Foundation             | CO1 Describe H-spectra and limitation, refinement of Bohr theory, Bohr-Sommerfeld theory.<br>CO-2 Understand the mechanism in transition metal complexes, Born Haber cycle to calculate lattices energy.<br>CO-3. Study the structure of atom, Hunds rule, term symbol, calculation of microstate and selection rule.                                                                                                                                                                                                                                 |

|                   |                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------|-----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   |                                                                 | CO-3 Understand reactivity and mechanism of name reactions reactions.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                   | Group-B<br>Detailed study of the different classes of compounds | CO-4 Explain structure and configuration of glucose and fructose. Mechanism of Ruff degradation, Kiliani Fischer Synthesis, Osazone formation.<br>CO-5 Know aromaticity, preparation and properties of aromatic compounds.<br>CO-6 Discuss properties of hydroxy carboxylic acids. Preparation and properties of Lactic acid, citric acid.<br>CO-7 Understand Baeyer's Strain Theory. Preparation and properties Polymethylenes.                                                                            |
|                   | Group-C:<br>Applied organic chemistry                           | CO-8 Understand principle and working of TLC, paper and gas chromatography.<br>CO-9 Know synthetic applications of reagents aluminium isopropoxide & aluminium chloride.<br>CO-10 Describe structure of proteins.                                                                                                                                                                                                                                                                                           |
|                   | Practical Paper-IV                                              | CO-1 Determine Molecular weight of volatile liquids using Duma's bulb & Victor Meyer method.<br>CO-2 Know principles and experimental determination of surface tension, viscosity & partition coefficient.<br>CO-3 Determine experimentally rate constant & refractive index and calculate heat of neutralisation.                                                                                                                                                                                          |
| B.Sc.III(Honours) | V-A (Physical chemistry)<br>Group-A<br>States and structure     | CO-1 Know collision theory of gases & determination of characteristic parameters, temperature and pressure dependence of viscosity.<br>CO-2 Describe Co-ordination number of ions, stoichiometric and non-stoichiometric defects. Elementary idea of X-ray diffraction.<br>CO-3 Know the principle and application of IR, UV-vis spectroscopy.<br>CO-4 Explain Photochemistry and it's principles Lambert-Beer Law, Stark Einstein Law, calculate quantum yield and define various Photochemical reactions. |
|                   | Group-B<br>(Equilibrium)                                        | CO-5 Apply Maxwell thermodynamic relations, chemical potential in an ideal gas mixture, Absolute entropy.<br>CO-6 Understand phase equilibrium : Three component systems of partially miscible liquids and role of added salts.                                                                                                                                                                                                                                                                             |
